Summary

Final-year Computer Science student with hands-on experience in backend development, data pipelines and cloud deployments. Delivered a cloud-deployed analytics platform at RIT that streamlined reporting and built high-throughput microservices at Axisray, cutting runtime by 25%. Demonstrates strong data curiosity and strategic thinking, seeking to build foundational engineering skills within a global markets infrastructure environment.

Education

Rochester Institute of Technology Rochester, NY <i>Master of Science, Computer Software Engineering</i> (GPA: 3.71/4.0) Achievements: Course Assistant for Foundations of Software Engineering, Engineering Cloud Software Systems, and Problem Solving I (Python).	Aug 2023 - Dec 2025
Gujarat Technological University Ahmedabad, Gujarat <i>Bachelor of Engineering, Electronics and Communication</i> (GPA: 3.4/4.0)	Aug 2019 - May 2023

Experience

Rochester Institute of Technology - Institutional Research, Data & Analytics <i>Dashboard Developer</i> - Architected backend data services for high-volume analytics pipelines on GCP using Spring Boot and BigQuery, enabling 50% faster data processing and supporting higher query capacity by leveraging financial markets knowledge. - Translated stakeholder requirements into actionable reporting outputs using SQL and Tableau, accelerating decision cycles by 40% through advanced data analysis. - Orchestrated ingestion workflows across heterogeneous sources to increase reporting reliability, ensuring 100% end-to-end data accuracy.	May 2025 - Dec 2025 <i>Rochester, NY</i>
Axisray Pvt Ltd. <i>Software Engineer Intern</i> - Engineered backend microservices in Java and Python following best coding practices, strengthening throughput and stability, resulting in a 50% improvement in runtime behavior. - Pioneered Flask-based REST endpoints to enable service-to-service communication within a distributed system, boosting exchange consistency by 60%. - Revamped Java and Python data workflows and automation paths, delivering 25% efficiency gains and reducing operational overhead - Identified critical performance bottlenecks in legacy services using profiling tools such as JProfiler and Py-Spy, optimizing code paths to cut end-to-end execution time by 25%. - Overhauled Spring Boot backend components using modular design and comprehensive unit tests, which enhanced code maintainability and reduced deployment failures by 50%.	Jan 2023 - May 2023 <i>Ahmedabad, Gujarat</i>
Moon Technolabs Pvt Ltd <i>Data Science and AI/ML Engineering Intern</i> - Executed distributed processing on Spark using C++ in AWS, enabling production-scale analytics workloads and delivering 2x faster data processing speeds by applying broad technology knowledge. - Unified Python service layers and REST APIs to link HRMS and CRM platforms, establishing reliable cross-system data flow and improving data consistency by 45%. - Delivered three client-facing solutions end-to-end, boosting release quality and lowering operational costs by 30%. - Collaborated with engineering teams to design system architecture and plan rollouts, ensuring smooth deployments and minimizing downtime to nearly 0%.	May 2022 - Oct 2022 <i>Ahmedabad, Gujarat</i>

Projects

CrimeAtlas - Constructed a distributed analytics solution using MERN stack and Google Cloud for processing and visualizing large event datasets with 99.9% uptime, demonstrating strong cloud and system design skills. - Provisioned backend services for real-time ingestion and retrieval of geospatial records, handling 50% more concurrent requests. - Formulated clustering algorithms and parallel data-processing pipelines in Python to analyze high-volume geospatial inputs, enabling scalable computation and deeper insights into crime patterns.	Feb 2025 - Apr 2025
PersonaCraft - Empowered LLM-driven workflows by developing backend services in Python/Flask and integrating AWS Lambda and S3 for AI operations, demonstrating a curiosity for data and automation. - Instituted REST interfaces supporting AI content generation, coordination logic, and service routing, increasing response speed by 50%. - Fortified containerized deployments with Docker and Kubernetes and enhanced cloud integrations to improve scalability, resilience, and operational reliability.	Jul 2024 - Aug 2024
EquiPay - Propelled transaction automation using React Native and FinTech APIs, improving processing speed by 20% and boosting extraction accuracy. - Launched scalable compute instances on EC2 with load balancing to sustain high availability under peak traffic loads.	May 2024 - Jun 2024
Indian College Recommendation System - Conceptualized cloud-first microservices with Flask and AWS to extract structured insights from large inputs at scale. - Dockerized services hosted on EC2 behind load balancers to maintain 99% application availability. - Enforced REST endpoints enabling distributed processing flows and reliable request handling across the network.	Jan 2023 - May 2023

Skills

- Languages & Frameworks:** Java, Python, C++, JavaScript, TypeScript, React, Next.js, Flask, Spring Boot, Node.js
- Cloud & DevOps:** AWS, Azure, GCP, Vercel, Docker, Kubernetes, GitHub Actions, Jenkins, Linux, CI/CD
- Databases:** PostgreSQL, MySQL, MongoDB, Neo4j, Snowflake, BigQuery
- Testing & QA:** Selenium, JUnit, TestNG, Pytest, Playwright, BDD, Unit Testing
- Practices:** Data Structures and Algorithms, Agile, System Design, Algorithm Design, Object-Oriented Design
- Professional Skills:** Technology Knowledge, Coding, Financial Markets Knowledge, Data Analysis
